A detail-orientated software engineer actively pursuing opportunities to learn new languages/ideas/workflows, provide programming skills, and bring enthusiasm to any environment! Fast learner with basic knowledge of PHP/Laravel looking to grow my knowledge in the software field.

SKILLS   Languages / Frameworks / Technologies

Laravel | PHP | Tailwind CSS | HTML5 | CSS3 | | MySQL/SQL | REST API's | MacOS | Git & Github | Slack

EDUCATION   Southern Careers Institute Powered by Woz U   *11/2018 – 9/2019*

Acquired skills to build highly interactive web applications using Java, HTML, CSS, React, Python and several other interesting programming languages. Worked 40+ hours weekly on individual and team projects to better understand not only the languages and frameworks but ALSO work fluidly in teams and understand the software development process.

WORK/EXPERIENCE   **Test Technician, Honeywell**   *8/2017-Current*

- Test all pneumatic valves for a range of commercial and military airplanes to ensure proper calibration of unit
- Work together with a team to assemble, test, prepare, then ship the unit to the customer
- Work with a team to handle any issues as soon as they arise to keep the product moving through the facility
- Ensure the customer gets the product quickly and built/tested properly

Remote Laravel Software Engineer (Unpaid Internship), Ripe Metrics   *8/2020-1/2021*

- Use **Laravel**, **Tailwind, PHPUnit** and a **TDD** (Test Driven Development) workflow to assist in building out a multi-faceted, user friendly, marketing platform
- Work with the design team to help redesign UI using tailwindcss and livewire
- Communicate with other developers, designers, and managers on a daily basis

PROJECTS

Franchise admin panel built with Laravel and PHP
GITHUB URL: https://github.com/BJBT/tall-stack-dashboard

*I created and am currently working on an admin panel for small businesses to manage marketing promotions and employee information. The project is built using the PHP framework **Laravel** and **tailwindCSS**. You are able to register and login as a user, where you can then manage / onboard new employees, create surveys for existing customers with questions and choices for specific questions, and create coupons for your customers to dispatch later all through CRUD based operations. The admin dashboard hosts info about new employees, sales, and other basic company information.*
